CELL PHONE WITH
SIGNALBOOST™
(Actual performance may vary)

The **Wilson®** SIGNALBOOST™:

Provides up to 10 times more power
than your cell phone

Improves voice/data signal quality

Reduces disconnects & dropped calls

Works on all cell phones & data cards
(Universal Connector included)

Portable, easy to install

 **Wilson®**
Electronics, Inc.

The **Wilson®** SIGNALBOOST™

Wilson Electronics' SIGNALBOOST™ amplifier can significantly improve the performance of your cell phone or cellular data card in both vehicle and in-building applications. Together with a Wilson antenna, the amplifier's advanced technology is designed to increase your signal up to 10-15 times, reduce voice dropouts and disconnects, and increase data communication rates needed for 3G technologies.

How It Keeps You Connected

With SIGNALBOOST™, you'll be able to make calls and use your laptop data card in places where you never could before. SIGNALBOOST™ transmits with up to three full watts of power (more than triple that of a typical cell phone). Its sensitive electronics can detect even faint signals from distant or "shadowed" cell sites and boost them directly to your cell phone or cellular data card with remarkable quality and clarity. SIGNALBOOST™ captures the cell signal, reduces noise and static, and keeps you connected!

Works on All Cell Phones and Data Cards

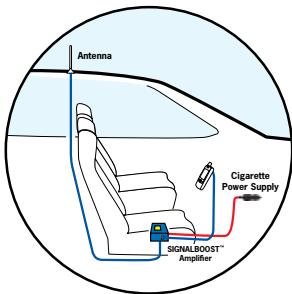

SIGNALBOOST™ works on all cell phones and data cards, thanks to Wilson's universal connector, included with the amplifier. The universal connector attaches easily with the supplied Velcro™, eliminating the need for an equipment-specific adapter. The amplifier's dual-band technology ensures compatibility with both cellular and PCS frequencies. SIGNALBOOST™ works on all generations of CDMA, TDMA and GSM technologies. (It is not designed for use with iDEN systems such as Nextel, SouthernLINC and Mike.)

Portable and Easy to Install

Compact and lightweight, SIGNALBOOST™ is easily installed in cars, trucks, RVs, boats, homes or offices. The convenience of the universal connector allows you to move SIGNALBOOST™ from one location to another. Wilson offers a wide range of antennas and accessories that enable you to customize SIGNALBOOST™ to meet your specific needs.

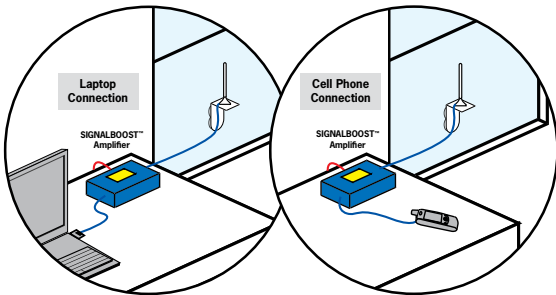

Mobile Installations

Wilson's SIGNALBOOST™ amplifier works great when you're on the go, whether in a passenger car, an RV, a truck, or a boat. Antenna options include magnet mounts for vehicle roofs or trunks (as shown in this diagram), as well as glass-mount, mirror-mount, roof-mount and spring-mount units.

Home/Office Installations

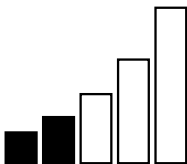

If you can get a cell signal outside your home or office, the Wilson SIGNALBOOST™ can help you bring it inside to your cell phone or data card. Wilson offers antennas that attach to the window (as shown in these diagrams), affix to the ceiling or sit on a desk or table.

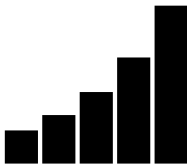

Extend your range with Wilson's SIGNALBOOST™

- Improves voice/data signal quality
- Up to 3 watts of power
- Extends cell phone battery life
- FCC and IC type accepted
- U.S. patent pending
- Wilson Model No. 811210
